SUMMARY

Analytical and detail-oriented Data Analyst with 2.5+ years of experience leveraging SQL, Python, and cloud platforms to extract, transform, and analyze complex datasets. Proven track record in building automated data pipelines, developing interactive dashboards, and performing statistical analysis to uncover actionable trends. Skilled in data modeling and cleansing to ensure high data quality, empowering cross-functional stakeholders to make critical, data-driven decisions.

EDUCATION

The University of Texas at Dallas

Aug 2024 - May 2026

- Master of Science, Business Analytics and Artificial Intelligence

Vishwakarma Institute of Information Technology (VIIT), Pune

Aug 2018 - May 2022

- Bachelor of Technology, Mechanical Engineering

WORK EXPERIENCE

Analytics Engineering Intern, Datacolor AI

Jan 2026 - May 2026

- Built and optimized SQL queries to extract and integrate beverage sales and weather datasets, improving reporting efficiency by 35% and supporting demand forecasting through integrated trend analysis.
- Applied statistical analysis using Python to identify weather-driven purchasing patterns, improving forecast accuracy by 15% and enabling more efficient supply chain and inventory planning.
- Automated data ingestion and reporting workflows using Azure Data Factory Triggers, reducing manual reporting effort by 60% and accelerating report generation from days to minutes.
- Designed interactive Power BI dashboards, reducing manual analysis time by 40% and enabling stakeholders to identify sales trends and demand fluctuations in real time.
- Performed SQL-based data validation, reconciliation, and 15+ User Acceptance Testing (UAT) checks to identify data inconsistencies, reducing reporting discrepancies by 20%.

Data Engineering and Analytics Intern, The BI Collaborative

Jun 2025 - Dec 2025

- Engineered ETL/ELT pipelines by connecting to multiple sources in Azure Data Factory to ingest EHR and finance data into Azure SQL DB that reduced manual handling and improved ingestion efficiency by 40%.
- Leveraged Python (Pandas) to transform raw data in excel into analysis-ready formats that increased reporting accuracy by 25% and enabled business teams to access insights twice as fast.
- Developed SQL-based validation and reconciliation checks to identify data inconsistencies across multiple source systems, improving data quality and ensuring reliable downstream reporting.
- Created interactive Power BI reports using DAX for KPI monitoring and trend analysis, which drove a 30% increase in data-driven decision-making across three business departments.

Data Engineer, Cognizant

Jun 2022 – Jun 2024

- Developed pipelines for customer-credit and third-party supplier files using PySpark, enabling a leading bank to monitor credit spending and streamline a Procure-to-Pay process which resulted in cost savings of approx \$200,000 yearly.
- Supported data modeling and schema optimization efforts to improve accessibility in the client's data warehouse and reduced SQL query run-time by 40% that saved the company an estimated \$50,000 annually in analyst time.
- Analyzed large customer datasets using complex SQL queries to ensure data quality and consistency throughout data layers that reduced Power BI reporting inconsistencies by 30%.
- Implemented automated data validation and monitoring checks across ingestion pipelines, proactively identifying data inconsistencies and improving the reliability of downstream reporting.

TECHNICAL SKILLS

- Programming: SQL, Python, R
- Data Engineering: ETL/ELT, Data Modeling, Data Warehousing, DAX
- Tools and Platforms: Snowflake([Certified](#)), Claude([Certified](#)), Databricks, Power BI, AWS, MySQL, MS Excel, Git
